How to Use Team Automata's VEX Robotics Part Library
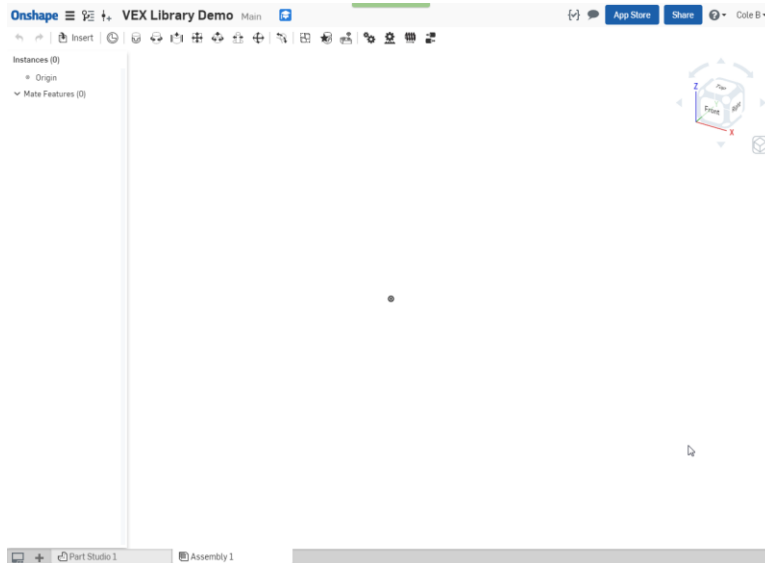

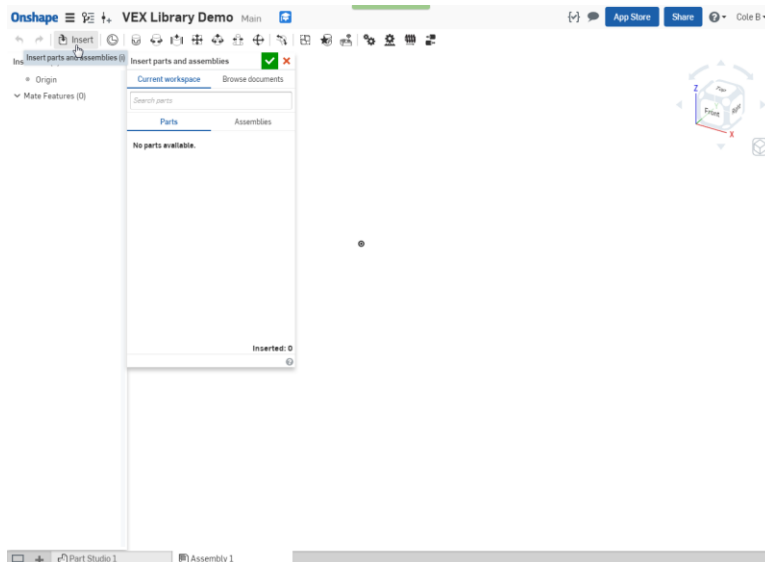

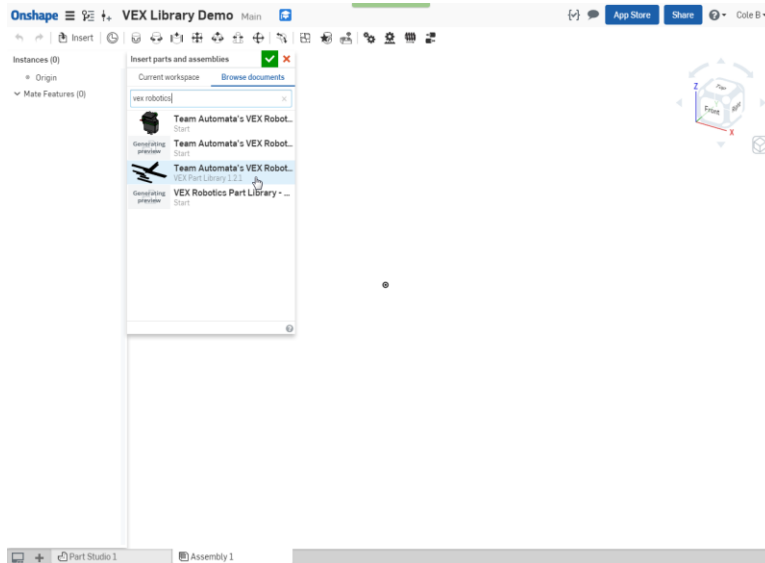

1. Open a blank assembly.

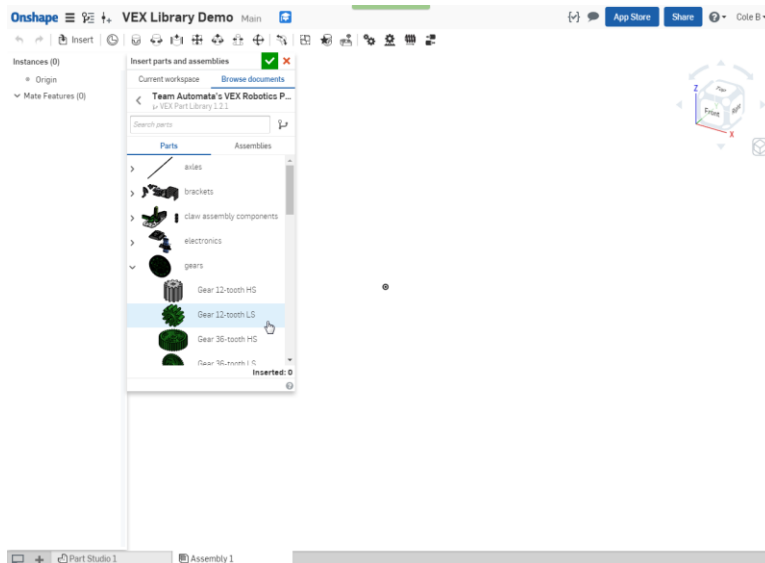

2. Click on the insert button.

3. Go to the "Browse documents" tab and search for "vex robotics". Select the part library with the version number underneath.

4. A list of components will appear. You can browse through these by category, or use the search box. The "Parts" tab will show individual parts, while the "Assemblies" tab will show multi-part components such as wheels, turntables, the claw kit, etc.

5. To insert components into the document, first click on the part you want, then click where you want to place it in the document. When you are done, click the green check mark.

6. You can now attach the parts using the mate commands on the top bar.
